SUMMARY

Technical Sales Specialist and Mechanical Engineer with 11+ years of experience in the design, development, and application of advanced hydraulic systems and mechanical components for off-road machinery and industrial sectors. Proven track record in driving revenue growth across EMEA markets (DACH and BeNeLux), managing complex OEM accounts, and delivering high-value technical solutions. Expert in bridging the gap between engineering innovation and commercial strategy, with deep expertise in product management, digital sales tools, and cross-functional leadership. Skilled in project management, stakeholder engagement, and technical training, with a strong focus on enhancing product adoption and operational efficiency.

SKILLS

- Technical Sales
- Product Launch
- Customer Engagement
- Value-Based Selling
- Customer Onboarding
- Product Lifecycle Management
- Engineering Process Optimisation
- Contract Negotiations
- Digital Sales Tools
- Product Configurators
- Technical Training
- Supplier Development
- Stakeholder Alignment
- Technical Proficiencies: Salesforce, Siemens Teamcenter, AutoCAD, Siemens NX, MS Office (Word, Excel, PowerPoint, Outlook)

EXPERIENCE

Technical Sales Specialist, Danfoss Power Solutions ApS, April 2022 - January 2025, Nordborg, Denmark

- Led end-to-end development and deployment of advanced hydraulic systems for off-road agricultural and industrial machinery across EMEA, translating complex customer requirements into value-centric proposals that enhanced product adoption and defended market share. Delivered strategic market studies and competitive benchmarking to uncover business opportunities and influence portfolio direction.
- Drove cross-functional collaboration to refine internal processes and accelerate product innovation, strengthening collaboration between commercial and technical stakeholders by increasing customer engineering team involvement to align product development with operational needs, and standardised application engineering processes across EMEA by training 60 engineers and redesigning workflows to eliminate inefficiencies and support frontline effectiveness.
- Presented technical solutions and live demonstrations at major trade events like Bauma and Agritechnica to secure new business and elevate brand presence, attracting OEMs and high-value partners to the Application Development Centre by reconstructing a mini excavator to demonstrate Danfoss product capabilities in live applications.
- Performed as primary technical liaison for key clients to resolve inquiries and support product integration across applications, spearheading stakeholder engagement to align customer feedback with rapid go-to-market strategies, retaining OEMs and strategic distributors during periods of uncertainty through consistent engagement and personalised support.
- Delivered €20M in annual revenue by leading OEM and premium distributor networks in Austria and Switzerland through fostering strong relationships and driving sustained commercial performance, grew BeNeLux market turnover to €15M via strategic OEM and distributor engagement and expansion of product reach across industrial and off-road machinery sectors.
- Accelerated global distributor adoption of remote-control systems by creating bespoke digital sales tools integrated with configuration platforms that simplified the buying journey, improved decision-making, enabled faster market response, and improved customer onboarding speed and process clarity by successfully deploying a digital platform guiding remote control product selection and user interaction.

- Increased customer competence and confidence through delivery of targeted technical training on new product releases, features, and processes aligned with business strategy.

Mechanical Design Engineer, Danfoss Power Solutions ApS, August 2018 - March 2022, Nordborg, Denmark

- Guided the project lifecycle from concept to implementation by coordinating requirements across engineering, procurement, and manufacturing stakeholders using structured communication and design management tools.
- Introduced a global supplier engineering process that improved early imperfection detection in castings, utilizing root cause analysis and supplier collaboration tools.
- Developed a programmable data management system that streamlined documentation workflows, achieving compliance with ISO and IATF 16949 using Unigraphics CAD and Siemens Teamcenter.
- Introduced structured data models across engineering platforms to improve accuracy and accessibility of supplier documentation using Siemens Teamcenter and Unigraphics CAD.
- Authored comprehensive training materials and implemented practical workshops to advance understanding of standardized design methodologies and compliance with industry benchmarks.
- Enhanced efficiency in supply chain collaboration by introducing clear engineering change protocols and collaborating with cross-functional teams to synchronize product updates.
- Directed multidisciplinary teams to refine product architecture throughout the development cycle, incorporating supplier input and ISO/IATF design standards.
- Coordinated product development from concept to release utilizing Siemens Teamcenter and Unigraphics CAD, aligning project outputs with internal and supplier requirements.
- Developed internal training sessions for advanced data structure systems, leading to higher proficiency in engineering software tools such as Siemens Teamcenter.

Design Engineer, Danfoss Power Solutions India Pvt. Ltd, January 2014 - July 2018, Pune, India

- Developed high-precision 3D models and technical drawings for hydraulic valves, ensuring 100% compliance with performance and manufacturability requirements.
- Reduced manufacturing defects and optimized output by collaborating with suppliers on design feasibility and refining production methods.
- Accelerated project timelines by managing engineering change processes, maintaining design integrity while meeting strict development milestones.
- Strengthened operational efficiency by leading process monitoring initiatives that identified and closed critical gaps in quality.
- Integrated local suppliers seamlessly by resolving early-stage design deviations and aligning component specifications with production capabilities.
- Utilized cross-functional expertise in manufacturing and assembly to drive successful new product development (NPD) efforts.

EDUCATION

Bachelor of Technology in Mechanical Engineering

Minor in Advanced Fluid Dynamics • Dr. Babasaheb Ambedkar Marathwada University • Maharashtra, India • 2014 • 89%
